Supplemental testing not indicated. Report as Nonreactive for HIV Ag/Ab testing.

Follow test cassette and specimen storage and handling policies per manufacturer's package inserts. Recollect specimens and/or obtain new testing reagents and repeat test.

Do not proceed with testing until all temperature and humidity conditions meet manufacturer's specifications. Repeat test with new cassette when acceptable.

If refrigerated, was specimen allowed to equilibrate to 18-25°C before testing?

Allow at least 30 minutes for specimen to come to correct temperature and repeat test with new cassette.

Were test reports reviewed by another analyst and distributed to submitters in the appropriate format?

Report results per HIV testing protocols. Include the supplemental information sheet with the report on positive specimens. Notify AHS on all discrepant screen/confirmation results for additional HIV-1 NAT.
